**3. To complete policies and regulations to promote the circulation of agricultural development**

Abstract

Circular agriculture is a revolution of traditional agriculture; it is also an important part of the circular economy. Policy and regulation can help guide and push the development of circular agriculture. This paper gives an introduction of the policy and regulation system for Chinese circular agriculture, together with suggestions about completing the system, which would be beneficial to the development of circular agriculture.

# 1. The policy and regulation system for circular agriculture

Circular agriculture is a revolution in the agricultural development concept and model .

## 1. The policy and regulation system for circular agriculture

policy and regulation can help guide and promote the development of circular agriculture.
