January 2019 (updated in February 2019)

This issue of SAIN Information Sheet gives a snapshot of China's agricultural production and trade in 2018.

In 2018, China started full implementation of the Rural Vitalization Strategy, which aims to promote integrated urban-rural development, and speed up the modernization of agriculture and rural areas.

As part of the Strategy, China continued supply-side reform in agriculture in 2018 with focus on adjusting the crop planting structure, optimizing the distribution of production zones, and strengthening production capacity by improving land quality, promoting green production technologies, fostering new type of agricultural business entities and training new generation of professional farmers.

What Did China Grow in 2018

In 2018, China's grain crop sown area was 117.04 Mha, 952 thousand ha less than in 2017 (adjusted with national census data, see annex 1), declined 0.8%. China continued reducing cereals sown area and encouraging pulses planting. As the result, cereals sown area declined to 99.69 Mha, 1.08 Mha less than in 2017. Meanwhile, the sown area for pulses increased by 1.2% from 2017, reached 10.17 M ha.

Table 1. Crop grown area in 2018

Crops	Sown area in 2018 (M ha)	Comparing 2017 (%)
Total sown area	117.04	0.8 ↓
Cereals	99.69	1.1 ↓
In which: Maize	42.13	0.6 ↓
Rice	30.19	1.8 ↓
Wheat	24.27	1.0 ↓
Pulses	10.17	1.2 ↑
Root and Tuber	7.18	0.1 ↑

How Much Did China Produce in 2018

The total grain output in 2018 was 657.89 million ton, 0.6% decrease than the year before. The cereals output in 2018 was 610.19 million ton, 0.8% decrease compared with 2017. There was a minor decrease in meat output, by 0.3% compared with 2017, in which pork output decreased by 0.9%, while beef, lamb and poultry output increased by 1.5%, 0.8% and 0.6% respectively.

Where Did China Produce Grain in 2018

In 2018, China's top ten grain production provinces were Heilongjiang, Henan, Shandong, Anhui, Hebei, Jiangsu, Jilin, Inner Mongolia, Sichuan and Hunan. These ten provinces produced 67% of the nation's total grain. The top three grain production provinces, Heilongjiang, Henan and Shandong accounted for 11.4%, 10.1% and 8.1% of the nation's total grain output respectively.

Comparing with 2017, China's top ten grain production provinces remain the same.

How Much Did China Trade Agricultural Products in 2018

In 2018, the total value of China's agricultural product trade was 216.81 billion USD, an increase of 7.7% compared with the previous year. Export was 79.71 billion USD, a 5.5%

increase, and import was 137.1 billion USD, a 8.9% increase. The trade deficient in the year was 57.38 billion USD, increased by 14% compared with 2017. China became a net agricultural product import country since 2004.

There was a 19.9% decrease in cereal imports, due to decreased imports of wheat, rice, barley and sorghum, although maize import increased by 24.7%. Soy import in 2018 totalled 88 million ton, 7.9% lesser than in 2017. The value of livestock products import increased by 11.3%, reached over 28.5 billion USD. There was a small decrease in pork and significant decrease in pig offal import, by 2% and 25% respectively, but a strong increase in beef, lamb and milk powder import, by 49.5%, 28.1%, and 11% respectively comparing with 2017. There was a strong increase in import (by 31%) and moderate increase in export (by 5.6%) of aquatic products in 2018.
